EDUCATION

Northwestern University 09/2026 - 06/2028 (Expected)
Master of Science in Electrical Engineering

Xi'an University of Technology 09/2022 - 06/2026
B.Eng. in Electronic Science and Technology | GPA: 3.6/4.0

ENTREPRENEURIAL EXPERIENCE

CloudSublet | Founder & Product / Engineering Lead 05/2026 – present

- **Product Research & Positioning:** Engaged with approximately 50 student subletters and analyzed 100+ sublet posts across WeChat groups and RedNote. Identified fragmented listings and limited sustained exposure as barriers to finding suitable tenants quickly; wrote the PRD for a campus-based marketplace that aggregates listings and enables in-app communication.
- **Product Prioritization & Feature Delivery:** Used feedback from 20+ housing seekers to prioritize browsing and filtering existing listings as the primary homepage flow. Built a directory of approximately 100 apartment buildings and 240+ aliases for address autofill, and added listing maps, route-based filtering, and live shuttle tracking to help users assess commute fit. Designed a contact-unlock rule requiring three replies from each side and identity verification, supported by UGC moderation.
- **User Validation & Iteration:** Piloted the product across five campuses and ran two beta rounds with 80 users. Designed 122 test scenarios across subletter and seeker workflows, then resolved 13 issues within a week of round two. After observing users leave before slow messages were sent, moved message handling to the backend and added send-progress feedback, cutting send time from ~11 s to 3–4 s. Launched on WeChat as 寓见云居 in 11/2026.

PROJECT EXPERIENCE

Saviu | Product & Full-Stack Developer | HackUTD Spacetime Track Honorable Mention (5th of 144) 11/2026

- **Product Definition:** Wrote the PRD for a 3-portal system for State Farm managers, field adjusters, and customers. Found State Farm's app had no messaging and designed a matching message center that could plug into it.
- **Escalation & Delivery:** Designed automatic escalation from text to phone call within 6 hours, then field visit and 911 referral, stopped by any reply. Built the real-time backend and P0–P2 triage on 50,000+ simulated households.

Caption | Developer 10/2026

- **Core Feature Development:** Built the Library, Reader, and Notepad pages of a study and research reading app in React and TypeScript. Implemented selection highlighting, notes linked to and grouped by source text, note editing and export, and GenAI explanations, summaries, and answers about selected text.
- **Testing & Iteration:** Validated core features with Vitest, React Testing Library, and usability testing. Turned feedback on import formatting, highlight layout, the toolbar, and note export into prioritized iteration requirements.

Shining Builders | Developer 05/2026 - present

- **Digest Pipeline:** Extended the open-source follow-builders project with summarize and deliver stages, turning feeds from 34 AI builders' X posts, podcasts, and blogs into a Chinese digest for Lark and a free daily public website.
- **Daily Website:** Built a static GitHub Pages site with relevance scoring, category filters, and search. Its GitHub trending module runs 18 keyword searches a day, scans 550+ repositories, ranks the top 120 AI tools, and tracks weekly star growth across 8,200+ repos. GitHub Actions has redeployed it daily since June 2026, with 160 automated updates to date.

SKILLS

Programming: SQL, Python, C/C++, JavaScript, TypeScript, Verilog/SystemVerilog
Software & Cloud: Node.js, React, Git/GitHub, Databases, APIs, OpenCV
RedNote (Xiaohongshu) Content Creator: Grew an independent account to 10K+ followers and 77K+ likes and saves with a 4-step content SOP: trend spotting - topic planning – scripting - post-production. The top post exceeded 500K views and another earned 6K+ likes. Generated RMB 10K+ from brand partnerships.
